The ultimate in vinyl reproduction

The culmination of years of design experience has finally lead to this - The MC REF V Phono stage by Whest Audio.

It is unlike any other phono stage ever designed. The MC REF V has been primarily designed as a moving coil phono stage with gain starting at 53dB.

The gain stages are Class-A bipolar and uses a higher than normal voltage rail to achieve its staggering dynamic performance. The 2 boxes are actually 2 totally individual gain blocks, each with their own power supply. Each gain block contains 20 hand built and hand trimmed Whest voltage regulators for near battery like impedance. The resulting effect is vinyl reproduction like you've never heard before. If what we all want is a system that lacks any sense of 'electronics' either in valve/tube or transistor format then it has arrived. The large scale dynamics along with a 'real' life size soundstage

are just 2 small aspects that set the MC REF V apart from the crowd. Add to this it's amazing resolving power and precise timing, it's lack of 'signature' and it's ability to play music like no other phono stage in the world, you can see why it is the envy of all other manufacturers.

Technology

Dual mono design
2 physically separated channels
20 discrete voltage regulators per channel
High current and high voltage
53dB -70dB in 4 steps
6 load settings
Hand selected parts used throughout
Designed to be the very best
